Agenda

- UI facelift
- Projects overview
- Review task workflow
- User roles
- Projects support details
 - Interoperability
 - Git Integration
 - DITA Project
 - Publishing

UI facelift

- Easier Navigation:
 - Breadcrumb
 - Navigation buttons on the application header
 - Navigation rail

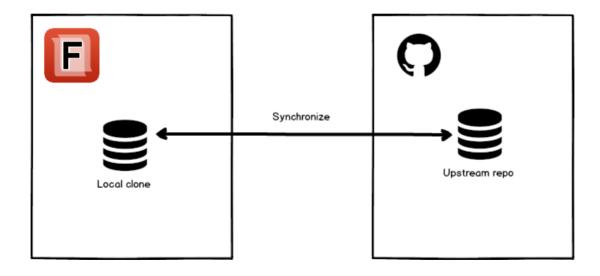

UI facelift- cont

- Task settings presented in a separate page
- Tasks list now use tabs
- More visible "Share" button

Projects overview

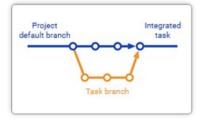

Imported from a Git repository & automatically synchronized

Projects overview

- Imported from a Git repository & automatically synchronized
- Features
 - Review Tasks are stored as Git branches

Projects overview

- Imported from a Git repository & automatically synchronized
- Features
 - Review Tasks are stored as Git branches
 - Automatically build PDF & WebHelp from the default branch

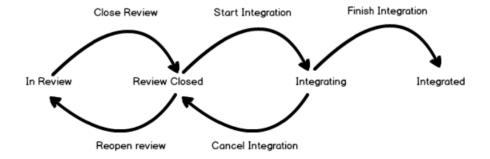

Review task workflow

- In Review
- Review Closed
- Integrating
- Integrated

Only for tasks created inside a project

Review task workflow – In Review

- Starting state
- Content under review comes from:
 - Uploaded from Oxygen XML Editor
 - (new) Latest commit on the project branch
- Reviewers are able to comment / suggest changes
- Tip: Concurrent Editing can be enabled in this state

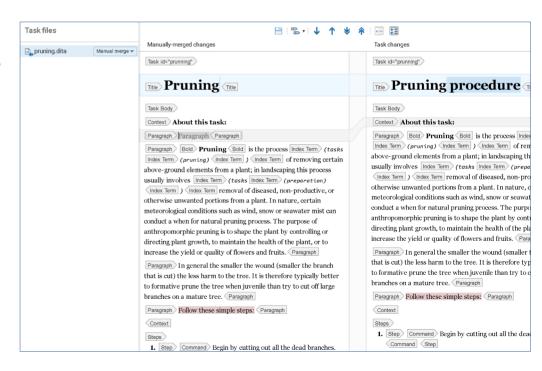

Review task workflow – Review closed

- Reviewers cannot add additional feedback
- Task owners will address reviewer feedback
 - If they need more feedback, they can re-open the task for review
- Tip: Edit from Oxygen XML Editor

Review task workflow – Integrating

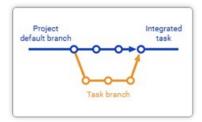

- Available only for a task created inside a "project"
- Only one owner can integrate the task
 - Web-based visual merge tool
 - The owner can also download the task content and integrate it manually
 - Creates a merge commit
 - "Integrate review task 'My Task'"

Review task workflow – Integrated

- The task was merged in the project's default branch
 - The history can be inspected with any Git client on the project repo
 - The task is "done" and is hidden by default in the tasks list

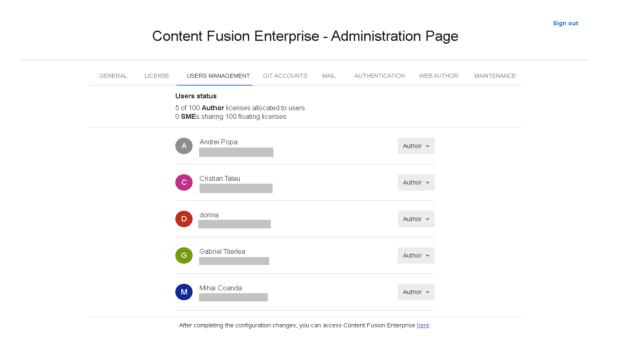

User roles

- Subject Matter Expert
 - Has access to the same functionality as in v5.1
 - Can be assigned as a reviewer (even on review tasks created inside a project)
 - Can create review tasks
 - Cannot see projects
- Author
 - Can create projects
 - Can create review tasks inside projects
 - Can configure publishing
 - Can see all review tasks inside a project

User roles

Roles can be assigned from the Administration Page

User roles

- Licensing
 - Existing licenses
 - Existing users will have the capabilities of SMEs
 - To add author seats, use the new license format (you can request a trial)
 - New licenses
 - Floating licenses for SMEs
 - Name-based licenses for authors
- Pricing
 - Same packages as before for SMEs
 - Per-author extra cost

Projects support-Interoperability

- Based on open standards
 - Project content is DITA content OASIS standard
 - Project history is stored in your Git repo
 - Publishing configuration is a DITA Project file defined by DITA-OT

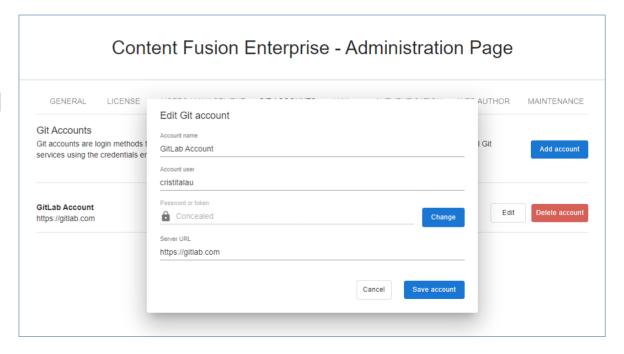

Projects support-Interoperability

- Supports any Git repository
 - Uses a service account
 - Uses password / Personal Access Token
 - SSH support will be added based on user feedback

Projects support- Interoperability

- Your Git repository remains the source of truth
- Content Fusion can be used along with existing tools
 - Authors can continue to use Oxygen XML Editor for editing
 - CI jobs that produce custom outputs will continue to work
 - GitHub actions that run validation scenarios will still run

Projects support – Git Integration

- CF acts as a read-only clone that pulls changes from upstream repository
 - Only the configured branch is fetched
- CF pulls from the upstream to stay up-to-date
 - Users can force a pull by pressing the "Synchronize" button
- CF pushes to upstream
 - Each change in the DITA Project file overwrites upstream changes
 - Each merge commit for a review task
 - Task branches are not pushed while in-progress

Projects support – Review tasks

- Review tasks can be grouped in projects
 - Task content is already on the server no need for lengthy uploads
 - Task history is available in the main Git repo
 - Easier to choose the context publication
 - Authors can see all the review tasks inside a project (as guests)

Projects support – DITA Project

- Publication
 - Consists of a DITA Map & filters pair
 - Represents a logical publication
 - e.g. Oxygen XML Editor user guide
 - Used in the editor to resolve keyrefs
 - Used as a base for defining deliverables
 - Maps to <context/>

Name		
Spring	g Flowers ctxt	
DITA M:	ap Path	
oprinc		
spring	g_flowers.ditamap	
spinig	g_flowers.ditamap	
	g_flowers.ditamap /AL Path	
		ust use the forward slash '/'

Projects support – DITA Project

- Deliverable
 - Consists of a Publication & output type
 - Represents an output of the project
 - e.g. WebHelp version of CF user guide
 - Maps to <deliverable/>

Publishing

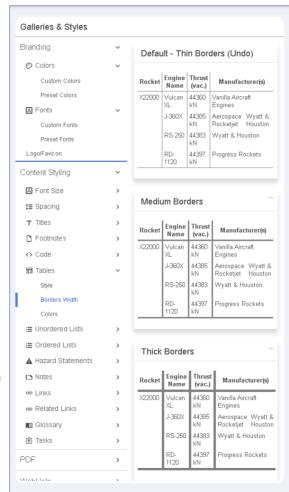

- Uses deliverables to
 - Configure a build schedule
 - Associate a publishing template
 - Predefined gallery
 - Create custom ones w. Styles Basket

Name	
Flowers guid	e
Description	
Publication	
Flowers	<u> </u>
☐ Schedule	e build:
Day:	Su Mo Tu We Th Fr Sa
Hour: C	Every 1 hour(s)
C	09:58 PM
Build on	ly if there are changes in the source repository
Type: We	ebHelp O PDF
Select a tem	plate.
	plate from templates gallery
Ox	ygen
Choose	e other template
O Use temp	plate from source repository
nath/to	/opt/directory
patri/to/	optimicatory

Styles basket

- GUI-based customization
- Galleries
 - Style choices for aspects
 - Cover a lot of use cases
- Benefits
 - No XSLT / CSS code
 - Live preview
 - Works in PDF & WebHelp

Preview

X22000 Super Rocket

The X22000 Super Rocket is the most powerful space exploration rocket in the world. With the ability to lift ne tons into orbit, it can lift more than twice the payload of the next closest space exploration vehicle, but at one-fit X22000 use proven technology and reliability.

X22000 Specs

Note: Example of CALS table with @colsep="1", @rowsep="1" and @frame="all" set on .

Table 1, X22000 Specifications

Name	Spec Value	Notes
Cores	4	Three cores make up the first stage.
Engines	37	Shortly after liftoff 19 of the engines are throttled down.
Mini Engines	55	Inside each core is a cluster of 55 mini engines.
Thrust at sea level	38297 kN	The engineers controls the cores thrust automatically by u called X22000_4Core.
Thrust in vacuum	44383 kN	

Z11000 Light Rocket

The **Z11000 Super Rocket** is the lightweight, mobile space exploration rocket. It is a smaller version of the X221 but it still has the ability to lift nearly 63 metric tons into orbit, but at one-half the cost of the X22000. The **Z110** be a very mobile, yet reliable space craft.

Z11000 Specs

Note: Example of simple table without additional attributes.

Name	Spec Value	Notes
Cores	2	Three cores make up the first stage.
Engines	19	Shortly after liftoff 11 of the engines are throttled down.
Mini Engines	22	Inside each core is a cluster of 22 mini engines.

Chara China Engina

Future plans

- Full release at the end of Oct
 - Bug fixes
 - More polished UX
- Going forward
 - Docs as code philosophy
 - Branch management, Git submodules
 - Features: edit files directly, output hosting, validation, refactoring, etc.

Let us know which feature you would love to see in Content Fusion!

THANK YOU!

Any questions?
